

Protective suit

The one-piece PVC protective suit is equipped with a three-piece hood that provides a comfortable fit as well as sufficient freedom of movement for the head. In addition, the hood can be safely and easily combined with different respiratory masks.

The arm design with inset sleeves is designed for a body-hugging fit, allowing optimal freedom of movement. The vertical double zipper has a cover for extended protection from harmful substances.

This coverall is suitable for cleaning work, e.g. with high-pressure cleaners or for tank cleaning.

The robust PVC material also protects when handling cleaning agents, low-concentration acids and alkalis, and inorganic salts.

This coverall has neither gloves nor footwear, so that your own protective equipment adapted to the respective application can be used.

- to be worn with or without breathing mask.
- high-closing zip, covered on full length.
- material: Polyvinylchloride (PVC), color: yellow.
- packing unit: 10 pcs. per carton.
