Breathing Air Distributor

The Breathing Air Distributor serves as a connecting station for users of breathing air. The station is made of stainless steel and is ready for wall mount. The air outlets are directed vertically downwards. Inlet female threads on both sides allow forwarding of the breathing air. If not used, one inlet opening will be closed by the closure screw (delivery included). Max. operational pressure: 10 bar.

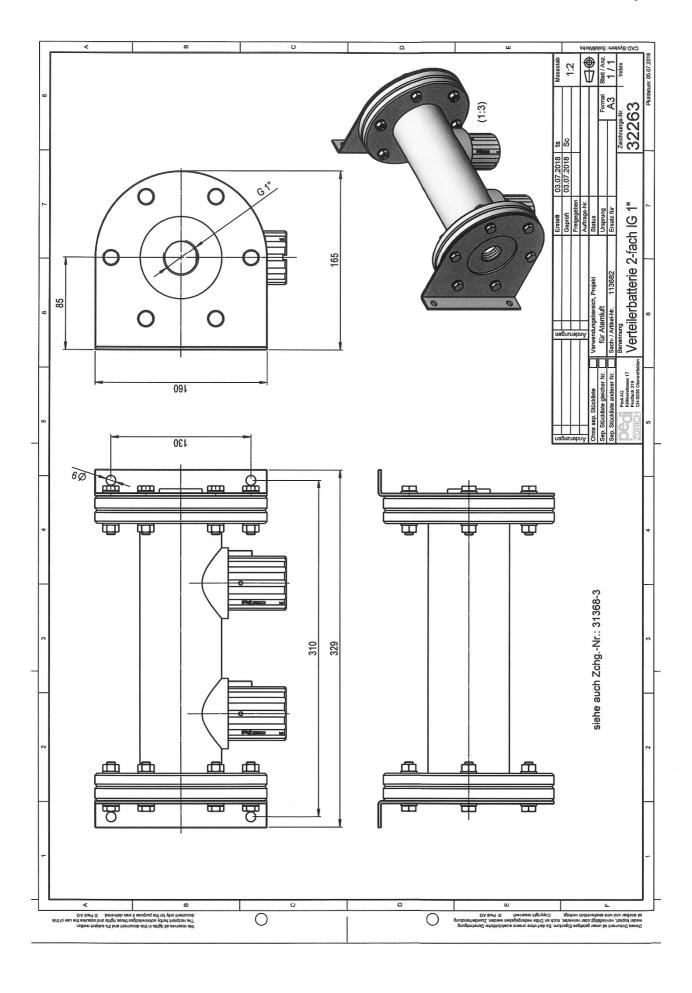

Inlet: female thread G 1" on both sides (1 x equipped with closure screw, reversible)

Outlet: Pedi Safety Coupling W (female piece)

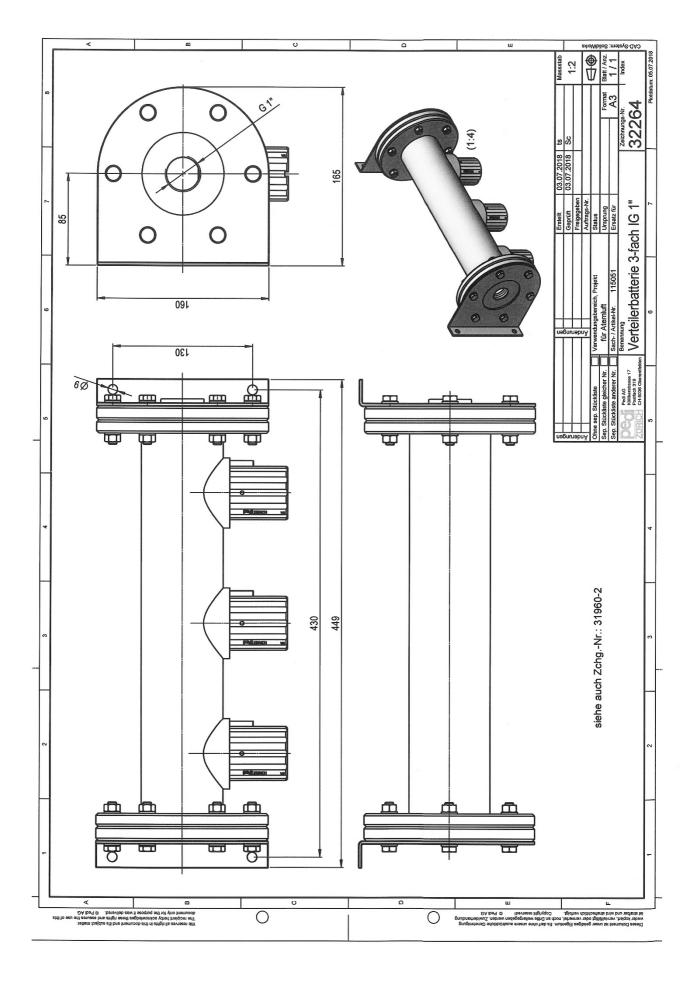

Breathing Air Distributor completely pre-assembled, ready for mounting.

Coupling W)
