

Test Swab

A smear test (standard smear test) is a standardized surface contamination control that wipes out a potentially contaminated, well-defined surface. After sampling, the test swab is analyzed in a measuring device.

The self-adhesive test swabs are designed to absorb contamination from dry, damp or wet surfaces. They are suitable for sampling according to DIN ISO 7503, part 1-3 resp. according to DIN ISO 2889.

- Test Swab made of 100% cotton fabric, white
- Diameter of disc 44 mm, self-adhesive
- applied on siliconised support paper, width 75 mm
- comes in practical dispenser box
- incl. one swab case and pen each carton
- Packing: 1 carton = 4 dispenser boxes = 4 x 1000 pcs. of Test swabs

Available designs:

Item no.	Description
100829	Test swabs not perforated
100830	Test swabs perforated (with perforated support paper to be pushed out for separating the test swab)
